

## CLAIMS

What is claimed is:

1. A method performed by at least one information handling system, the method comprising:  
on a display device, displaying an excerpt of XML-formatted information, and displaying a list of folders;  
in response to a command from a first user, saving the displayed excerpt of the XML-formatted information in a folder that is selected by the first user from among the displayed list of folders; and  
in response to a command from the first user, selectively enabling access to the selected folder by one or more second users specified by the first user.
2. The method of claim 1, wherein the one or more second users is a single second user preselected by the first user.
3. The method of claim 1, wherein the one or more second users is a group of second users preselected by the first user.
4. The method of claim 1, wherein selectively enabling access comprises:  
in response to a command from the first user before saving the displayed excerpt, selectively enabling access to the selected folder by one or more second users specified by the first user.
5. The method of claim 1, wherein selectively enabling access comprises:  
in response to a command from the first user after saving the displayed excerpt, selectively enabling access to the selected folder by one or more second users specified by the first user.

6. The method of claim 1, and comprising:  
associating other information with the saved excerpt in the folder, so that access to the saved excerpt includes access to the other information.
7. The method of claim 6, wherein the other information has a non-XML format.
8. The method of claim 6, wherein the other information is a human-readable text message.
9. The method of claim 6, wherein the other information is a hyperlink to a website.
10. The method of Claim 1, wherein saving the displayed excerpt comprises:  
saving the displayed excerpt of the XML-formatted information in an XML format.
11. The method of Claim 1, wherein displaying the excerpt comprises:  
displaying the excerpt of the XML-formatted information in a non-XML format..
12. The method of Claim 11, wherein the non-XML format is an HTML format.
13. A system, comprising:  
at least one information handling system for:  
on a display device, displaying an excerpt of XML-formatted information, and  
displaying a list of folders;  
in response to a command from a first user, saving the displayed excerpt of the  
XML-formatted information in a folder that is selected by the first user  
from among the displayed list of folders; and  
in response to a command from the first user, selectively enabling access to the  
selected folder by one or more second users specified by the first user.
14. The system of claim 13, wherein the one or more second users is a single second user preselected by the first user.

15. The system of claim 13, wherein the one or more second users is a group of second users preselected by the first user.
16. The system of claim 13, wherein the information handling system is for:  
in response to a command from the first user before saving the displayed excerpt,  
selectively enabling access to the selected folder by one or more second users specified by the first user.
17. The system of claim 13, wherein the information handling system is for:  
in response to a command from the first user after saving the displayed excerpt,  
selectively enabling access to the selected folder by one or more second users specified by the first user.
18. The system of claim 13, wherein the information handling system is for:  
associating other information with the saved excerpt in the folder, so that access to the saved excerpt includes access to the other information.
19. The system of claim 18, wherein the other information has a non-XML format.
20. The system of claim 18, wherein the other information is a human-readable text message.
21. The system of claim 18, wherein the other information is a hyperlink to a website.
22. The system of Claim 13, wherein the information handling system is for:  
saving the displayed excerpt of the XML-formatted information in an XML format.
23. The system of Claim 13, wherein the information handling system is for:  
displaying the excerpt of the XML-formatted information in a non-XML format..

24. The system of Claim 23, wherein the non-XML format is an HTML format.
25. A computer program product, comprising:  
at least one computer program processable by at least one information handling system for causing the information handling system to:  
on a display device, display an excerpt of XML-formatted information, and display a list of folders;  
in response to a command from a first user, save the displayed excerpt of the XML-formatted information in a folder that is selected by the first user from among the displayed list of folders; and  
in response to a command from the first user, selectively enable access to the selected folder by one or more second users specified by the first user; and  
apparatus from which the computer program is accessible by the information handling system.
26. The computer program product of claim 25, wherein the one or more second users is a single second user preselected by the first user.
27. The computer program product of claim 25, wherein the one or more second users is a group of second users preselected by the first user.
28. The computer program product of claim 25, wherein the computer program is processable by the information handling system for causing the information handling system to:  
in response to a command from the first user before saving the displayed excerpt, selectively enable access to the selected folder by one or more second users specified by the first user.

29. The computer program product of claim 25, wherein the computer program is processable by the information handling system for causing the information handling system to:  
in response to a command from the first user after saving the displayed excerpt,  
selectively enable access to the selected folder by one or more second users specified by the first user.

30. The computer program product of claim 25, wherein the computer program is processable by the information handling system for causing the information handling system to:  
associate other information with the saved excerpt in the folder, so that access to the saved excerpt includes access to the other information.

31. The computer program product of claim 30, wherein the other information has a non-XML format.

32. The computer program product of claim 30, wherein the other information is a human-readable text message.

33. The computer program product of claim 30, wherein the other information is a hyperlink to a website.

34. The computer program product of Claim 25, wherein the computer program is processable by the information handling system for causing the information handling system to:  
save the displayed excerpt of the XML-formatted information in an XML format.

35. The computer program product of Claim 25, wherein the computer program is processable by the information handling system for causing the information handling system to:  
display the excerpt of the XML-formatted information in a non-XML format..

36. The computer program product of Claim 35, wherein the non-XML format is an HTML format.
